

Wave – new
contoured indoor
wall panel for
extra shape

Wave is an interior cladding profile that makes a bold impact in any space with its attractive ridged surface.

The angled lines of this profile draw the eye with intriguing light and shade effects. And if you want to get creative with contrasting tones and textures, Wave is available in both natural and thermally modified aspen to offer lighter

and deeper color options that can be used separately or combined. The panels can also be placed alongside Thermory's Vire profile, giving you flexibility to play around and find your ideal look.

MIX & MATCH

PROFILE	WOOD SPECIES	THICKNESS (MM)	WIDTH (MM)	COVERING WIDTH (MM)	THERMAL MODIFICATION LEVEL
WAVE 	Aspen	28	65	55	-
	Thermo-aspen				Medium

Combinations tips:

Combine Wave with Vire and make a splash.

If you want a unique surface pattern for your wall, you're in luck. Wave is designed to be used alongside the more intensely ridged Thermory Vire profile to create a contoured wall with your own personal touch. Because both profiles offer lighter and darker shades thanks to their choice of natural and thermally modified aspen, you can also experiment with different wood tone combinations. With so many options to choose between, you're certain to find a look that suits your taste and makes a lasting impression.
