

Thermory's selection of sauna mouldings serves a variety of purposes, from covering gaps and filling in corners to rounding off the visual theme of the sauna.

Whether you're after a traditionally decorative style or a simpler look, we have you covered.

1. Preparation and storage
2. Installation of the mouldings
 - 2.1 External angle cover mouldings
 - 2.2 Internal angle mouldings
 - 2.3 Cover mouldings

1. Preparation and storage

Store the mouldings indoors, in a dry area where they're protected from both rain and direct sunlight.

Ideally, store the products in the room where they'll be installed for a few weeks prior to installation. This will allow the wood to acclimatize to the temperature and humidity in the room.

Make sure the mouldings are stored and installed at the same temperature. The ideal temperature is around 15–22 °C.

During storage, the mouldings must be kept in unopened packages. Only remove the shrink wrap immediately before installation.

Make sure you have enough material, as slight color variations can occur between batches.

Ensure that the sauna room is sufficiently ventilated.

Walls STP 15 x 90 mm alder, benches SHP 28 x 90 mm alder.

SHP 21x21

SI 14x30

SI 15x18

SI 15x18 mm can be used to cover the gap between the ceiling and the wall.

When installing mouldings on the ceiling, leave a gap of 4 mm between the mouldings and the wall to enable air movement.

2.3 COVER MOULDINGS

You can use suitable cover mouldings to hide joints in the sauna's wall panels. This will ensure a flawless, decorative finish.

These mouldings are ideal when you need to use shorter wall panels in your sauna space. Our KA mouldings can also be used as a supplementary design element, for instance to offset a light-colored wall with a darker tone or vice versa.
